```
Java
class Solution {
    public int countPairs(List<Integer> nums, int target) {
    }
}
JavaScript
/**
 * # @param {number[]} nums
 * @param {number} target
* @return {number}
var countPairs = function(nums, target) {
};
C++
class Solution {
public:
    int countPairs(vector<int>& nums, int target) {
};
C#
public class Solution {
    public int CountPairs(IList<int> nums, int target) {
   }
```
